Task:
• Build an application that allows you to add movies to an array with the possibility optional additional information.

• Use command line input to operate the application.

• Define functions in a separate file and import into app.js.

• The application must accept optional additional information about the entered movie (actor/director).

• At the end of runtime it must console log the movie added with any optional info.

Stretch Goal – Add multiple movies during runtime and console.log all movies at the end.

{ CODENATION }
